AMENDMENTS TO THE CLAIMS

1. (cancelled)

2. (previously presented) A videoconferencing system, comprising:

a videoconferencing unit for processing and transmitting audio and video data to a plurality of users of the system through a network interface; and

a web server embedded within the videoconferencing unit and coupled to the network interface, for transmitting a web page in response to a request from a user, wherein the web page allows the user to select a file for broadcast to the videoconferencing unit or allows the user to view a file being transmitted by the videoconferencing unit.

3. (previously presented) The system of claim 2, wherein the web page allows the user to select a file for broadcast to the videoconferencing unit and allows the user to view a file being transmitted by the videoconferencing unit.

4. (previously presented) The system of claim 2, wherein the file comprises a presentation.

5. (previously presented) The system of claim 4, wherein the presentation comprises a plurality of slides.

6. (previously presented) The system of claim 5, wherein the videoconferencing unit further comprises presentation engine for converting the slides into a corresponding set of thumbnail images.

7. (previously presented) The system of claim 2, wherein the web page further allows the user to perform diagnostic testing on the videoconferencing unit.

8. (previously presented) The system of claim 2, wherein the web page further allows the user to modify configuration parameters of the videoconferencing unit.

9. (previously presented) A videoconferencing system, comprising:

a videoconferencing unit for processing and transmitting audio and video data to a plurality of users of the system through a network interface; and

a web server embedded within the videoconferencing unit and coupled to the network interface, for transmitting a web page in response to a request from a user, wherein the web page allows the user to perform diagnostic testing on the videoconferencing unit.

10. (previously presented) A videoconferencing system, comprising:

a videoconferencing unit for processing and transmitting audio and video data to a plurality of users of the system through a network interface; and

a web server embedded within the videoconferencing unit and coupled to the network interface, for transmitting a web page in response to a request from a user, wherein the web page allows the user to modify configuration parameters of the videoconferencing unit.

11. (previously presented) A method for operating a videoconferencing system, comprising:

processing and transmitting audio and video data to a plurality of users of the system through a network interface within a videoconferencing unit, wherein the videoconferencing network comprises an embedded web server; and

accessing a web page from the web server; and

from the web page, selecting a file for broadcast to the videoconferencing unit for receipt by the other user.

12. (previously presented) The method of claim 11, further comprising, from the web page, viewing a file being transmitted by the videoconferencing unit.

13. (previously presented) The method of claim 11, wherein the file comprises a presentation.

14. (previously presented) The method of claim 13, wherein the presentation comprises a plurality of slides.

15. (previously presented) The method of claim 14, further comprising converting the slides into a corresponding set of thumbnail images within the videoconferencing unit.

16. (previously presented) The method of claim 11, further comprising, from the web page, performing diagnostic testing on the videoconferencing unit.

17. (previously presented) The method of claim 11, further comprising, from the web page, modifying configuration parameters of the videoconferencing unit.

18. (amended) A method for operating a videoconferencing ~~system~~ unit, comprising:

processing and transmitting audio and video data to a plurality of users of the system through a network interface within a videoconferencing unit, wherein the videoconferencing ~~network~~ unit comprises an embedded web server; and

accessing a web page from the web server; and

from the web page, viewing a file being transmitted by the videoconferencing unit.

19. (previously presented) The method of claim 18, wherein the file comprises a presentation.

20. (previously presented) The method of claim 19, wherein the presentation comprises a plurality of slides.

21. (previously presented) The method of claim 20, further comprising converting the slides into a corresponding set of thumbnail images within the videoconferencing unit.

22. (previously presented) The method of claim 18, further comprising, from the web page, performing diagnostic testing on the videoconferencing unit.

23. (previously presented) The method of claim 18, further comprising, from the web page, modifying configuration parameters of the videoconferencing unit.

24. (amended) A method for operating a videoconferencing ~~system~~ unit, comprising:

processing and transmitting audio and video data to a plurality of users of the system through a network interface within a videoconferencing unit, wherein the videoconferencing ~~network~~ unit comprises an embedded web server; and

accessing a web page from the web server; and

from the web page, performing diagnostic testing on the videoconferencing unit.

25. (amended) A method for operating a videoconferencing ~~system~~ unit, comprising:

processing and transmitting audio and video data to a plurality of users of the system through a network interface within a videoconferencing unit, wherein the videoconferencing ~~network~~ unit comprises an embedded web server; and

accessing a web page from the web server; and

from the web page, modifying configuration parameters of the videoconferencing unit.
